means for displaying a plurality of image cells in the view finder, each of the image cells corresponding to one of the captured images, wherein at least one of the image cells [including] includes an image area for displaying the corresponding captured image, and an icon area adjacent to the image area for displaying additional information regarding the corresponding captured image; and

means for displaying graphical icons in the icon area indicating the media types associated with the captured image.

C4

~~8.~~  
~~10.~~ (Twice amended) A system as in claim ~~17~~<sup>7</sup> wherein each of the captured images are stored in a file format that includes compressed image data, thumb nail image data, and information indicating the associated media types.

~~9.~~  
~~11.~~ A system as in claim ~~10~~<sup>8</sup> wherein the captured image is displayed in the at least one image cell by displaying the thumb nail image data from the respective file format.

C5

~~10.~~  
~~12.~~ A system as in claim ~~11~~<sup>9</sup> wherein media type information for each captured image is stored in a respective file format.

~~11.~~  
~~13.~~ A system as in claim ~~12~~<sup>10</sup> wherein text is displayed in the icon area of the at least one image cell corresponding to the media type information stored in the file format.

Attorney Docket: P108

~~12.~~~~11~~~~14.~~

A system as in claim ~~13~~ wherein media types comprising multiple images are stored in a multiple media type file format, the multiple media type format including plurality of file formats for each of the multiple images, and a header for pointing to each of the file formats.

~~13.~~~~15.~~

(Twice Amended) A digital camera device comprising:

*C5  
cancel.*

a memory device coupled to the digital camera device for storing sets of image data, each set of the image data having one or more media types associated therewith, wherein the media types include a still image, a burst image, a time lapse image, a panorama image, a movie clip, and sound;

a memory manager for allocating storage locations within the memory device to store the sets of image data, the image data stored in a file format that includes the image data, a thumb nail image of the image data, and an information field for storing information regarding the image data, including the associated media types; and

an interface coupled to the memory device for displaying a plurality of image cells corresponding to the image data, wherein at least one of the image cells includes an image area for displaying the thumb nail image of the corresponding image data, and an icon area adjacent to the image area for displaying additional information regarding the corresponding image data, including graphical icons indicating the media types associated with the captured image.
